

Coffee, Lakeside

at the Clint Johannes Education Building
1655 County Road 16, Wahoo

Thursday, June 11

**9:00 a.m.
to
10:00 a.m.**

Wetlands of Nebraska

Over the last 200 years, Nebraska has experienced a 35% decrease in wetland acres from 2.9 million to 1.9 million.

Wetlands perform many ecosystem functions such as groundwater recharge, water purification, flood control, wildlife habitat, and more. Join Sydney Abbott, Education Coordinator as she discusses the different types of wetlands you can find across Nebraska and how important it is to conserve them.

**Hot coffee and
fresh donuts
provided!**

**Do you have a
topic you'd love to
learn more about?
